Question/problem statement:

In this project we are aiming to build a Chatbot system that takes a complains and problems about parking lot.

The Data set:

In this project we are about to search or generate our own dataset based on many methods such as google forms, tweets and many more methods.

The used tools:

different tools have been used to achieve this goal such as:

1- Python programming language
2- Numby library
3- Pandas' library
4- Matplotlib library
5- SeaBorn
6- Sklearn
7- NlTK
8- Camel

The MVP:

The main goal of this project is to build a chatbot System that receives complains and problems by interacting with people to help them in their problems in the parking lots.
